SUMMARY

Full-stack developer (React, Node.js/Express, PostgreSQL) with hands-on experience shipping and deploying web applications — authentication systems, REST APIs, and relational database design. BCA graduate, currently pursuing MCA. Comfortable owning a feature end-to-end: schema design, backend logic, and a responsive frontend.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, C, SQL
- **Web:** React.js, Node.js, Express.js, HTML5, CSS3, REST APIs
- **Databases:** MySQL, PostgreSQL, Supabase
- **Tools:** Git, GitHub, VS Code
- **Deployment:** Vercel, Render, Netlify (all projects deployed live)
- **Auth & Payments:** Session-based authentication, bcryptjs password hashing, Razorpay integration
- **Concepts:** OOP, DBMS, Data Structures, API Integration, Responsive Design
- **Training:** Front-End Development with React.js (workshop)

PROJECTS

LendnLearn — Book-Sharing & Rental Platform

2024 – Present

PHP, PostgreSQL, Supabase, HTML, CSS, JavaScript

- Built a peer-to-peer book rental platform with search, listing management, and in-app contact between lenders and borrowers.
- Designed the PostgreSQL schema in Supabase to track book availability in real time, preventing double-booking of the same copy.
- Implemented user authentication and session handling from scratch; built responsive UI in vanilla HTML/CSS/JS with no framework overhead.

Golf Charity Platform — Backend & Payments

2025

Node.js, Express.js, EJS, PostgreSQL, Supabase, Razorpay

- Architected the Express.js backend for a charity golf event platform, including session-based authentication and role-based access.
- Integrated Supabase PostgreSQL for relational storage and Razorpay for payment processing; managed environment variables and credentials securely across dev and production.
- Diagnosed and fixed a deployment failure caused by a deprecated crypto dependency by migrating auth hashing from bcrypt to bcryptjs — restored builds without any native-binding requirement.

[GitHub](#) · [Live Demo](#)

Python Desktop Games (Tkinter)

2023 – 2024

- Built Snake, Tic-Tac-Toe, and a Digital Clock in Python/Tkinter, implementing game loops, collision detection, and event-driven UI updates.
- Applied conditional game-state logic and basic AI (win/draw detection, opponent moves) to make the games fully playable.

[GitHub](#)

INTERNSHIP EXPERIENCE

Python Development Intern — InternPe (Remote)

Feb – Mar 2024

- Rebuilt three classic games (Snake, Connect Four, Tic-Tac-Toe) in Python to practice core logic — collision detection, turn-based state, and scoring — under a fixed sprint timeline.

EDUCATION

Master of Computer Applications (MCA)

2025 – Present

GLA University, Mathura, India (Online)

Bachelor of Computer Applications (BCA)
